

U.S. Department Of Energy to Implement Tactical Survey(TM) Security Technology For Protective Force Management

WFI Completes Delivery of Tactical Survey(TM) to DOE, Oak Ridge National Laboratory, and Wackenhut Services, Inc.

SAN DIEGO, June 13, 2006 /PRNewswire-FirstCall via COMTEX News Network/ -- WFI (Nasdaq: WFII), a global leader in the design, deployment, and management of wireless communication networks, information technology solutions and security systems, announced today that it was selected by the U.S. Department Of Energy (DOE), Oak Ridge National Laboratory (ORNL), and Wackenhut Services, Inc. to implement its Tactical Survey(TM) security tool at facilities located in Tennessee to enhance the security readiness of the Laboratory Protection organization at Oak Ridge National Laboratory. Implementation of the survey began in mid- 2005, and was recently delivered for utilization at the facility. The ORNL Tactical Survey(TM) is a computer-based technology developed by WFI and its partner, Tactical Survey Group, Inc. (TSG) of San Bernardino, California.

The Tactical Survey(TM) System is a computer-based security tool that presents a 360-degree virtual tour of any facility, providing three- dimensional tactical images of a building and its immediate surroundings. The digital images displayed by Tactical Survey(TM) are embedded with related tactical data, including hazardous material types and locations, aerial photos, ingress and egress videos, key personnel, building construction information, utility shutoff locations with instructions, communications infrastructure, fire fighting assets, fire and security alarm systems, and perimeter control systems. Using the Tactical Survey(TM), the Laboratory Protection organization at Oak Ridge National Laboratory and the Protective Force organization of Wackenhut Services, Inc. will have a capability for their emergency responders and protective force members to visualize more than one million square feet across several complex structures that are part of the Lab's facilities. In addition to the Tactical Survey(TM) System, WFI and TSG are providing a comprehensive, on-site first responder training program, incorporating the survey into live training scenarios.

The effort was made possible and funded through the Department of Defense's Technical Support Working Group (TSWG), an office of the DoD charged with bringing cutting-edge technologies to a broad spectrum of government agencies with specialized security requirements. Additionally, the Department of Energy's Office of Security and Safety Performance Assurance provided funding for staff support at Oak Ridge National Laboratory.

"Global experience shows that the most successful emergency planning programs include a combination of advanced safety preparedness and training. The WFI and TSG group offers safe and highly effective methods that can be used by all emergency personnel," said Robin Mickle, President of WFI's Government Services, Inc. "ORNL has demanding safety and security requirements for protecting valuable assets and key personnel. We know how important having the right tool is in responding to a crisis for public and federal agencies. We are committed to meeting our customers' needs so they are well prepared for any emergency situation."

"The Tactical Survey(TM) is an essential piece of our response planning documentation, designed to assist the protective force and law enforcement agencies during an interagency tactical operation," said Mr. Bobby Beaty, Manager of Special Operations at Wackenhut Services, Inc. - Oak Ridge.

WFI Government Services, Inc. is a wholly-owned subsidiary of WFI, with offices and project locations throughout the United States. Areas of expertise in this division of the Company include technical resources, consulting, logistics and RFID solutions, homeland security and public safety applications, and communications technology services.

About Oak Ridge National Laboratory

Oak Ridge National Laboratory is the Department of Energy's largest multi- purpose laboratory. Managed since April 2000 by a partnership of the University of Tennessee and Battelle, ORNL was established in 1943 as a part of the secret Manhattan Project to pioneer a method for producing and separating plutonium. ORNL is an international leader in a range of scientific areas that support the Department of Energy's mission. The laboratory's six major mission roles include neutron science, energy, high-performance computing, systems biology, materials science at the nanoscale, and national security.

About Wackenhut Services, Inc.

Wackenhut Services, Inc. is a leader in the security industry, with over 135 contract-years of experience providing protective force services. In 1999, the U. S. Department of Energy (DOE) selected Wackenhut Services, Inc. to be the provider of security and related protective services for DOE facilities in Oak Ridge, Tennessee. Wackenhut Services, Inc. began Oak Ridge operations in January 2000, providing professional, comprehensive, and multi-disciplinary security services, including the operation of a paramilitary protective force, information and personnel security, property searches/inspections, canine explosives and drug detection, operation of a security training facility; performance testing; technical surveillance countermeasures, and crisis negotiations.

About WFI

Headquartered in San Diego, CA, WFI is an independent provider of systems engineering, network services and technical outsourcing for the world's largest wireless carriers, enterprise customers and for government agencies. The company provides the design, deployment, integration, and the overall management of wired and wireless networks which deliver voice and data communication, and which support advanced security systems. WFI has performed work in over 100 countries since its founding in 1994. News and information are available at www.wfinet.com. (code: WFI-mb)

Notice Regarding Forward-Looking Statements

This news release contains certain forward-looking statements including, without limitation, expressed or implied statements concerning the Company's expectations regarding anticipated operating results for 2006, future financial performance and cash flows and market developments that involve risks and uncertainties. Such statements are only predictions, and the Company's actual results may differ materially. Factors that may cause the Company's results to differ include, but are not limited to: changes in the scope or timing of the Company's projects; changes or cutbacks in spending by the U.S. Department of Defense, which could cause delays or cancellations of key government contracts; slowdowns in telecommunications infrastructure spending in the United States and globally, which could delay network deployment and reduce demand for the Company's services; the timing, rescheduling or cancellation of significant customer contracts and agreements, or consolidation by or the loss of key customers; failure to successfully consummate acquisitions or integrate acquired operations; the rate of adoption of telecom outsourcing by network carriers and equipment suppliers; the rate of growth of adoption of WLAN and wireless security systems by enterprises; and competition in the marketplace which could reduce revenues and profit margins. The Company undertakes no obligation to update any forward-looking statements. These and other risk factors are more fully discussed in the Company's Quarterly Report on Form 10-Q for the period ended March 31, 2006 and in other filings made with the Securities and Exchange Commission.
